

Sage 300

Construction and Real Estate

Open Database Connectivity

Optimize your reporting and analysis capabilities. With Sage 300 Construction and Real Estate (formerly Sage Timberline Office) Open Database Connectivity, you're able to expand your flexibility to include applications beyond Sage 300.

With ODBC software, you can easily move data back and forth between Sage 300 applications and other popular software, like Microsoft Excel, Microsoft Word, Microsoft Access and SAP® Crystal Reports for Sage 300 Construction and Real Estate. In short, ODBC helps you streamline work activities and increase analysis and reporting capabilities.

For instance, use ODBC to mail merge a Word document with Sage 300 vendor information to alert vendors who need to update their insurance. Or transfer estimate data from Excel to graphically show how your estimate breaks out by category (labor, material, equipment, etc).

ODBC also gives you the tools to keep the Sage 300 data you use in other software up to date and ready to use. So you can be confident in the accuracy of the work you deliver.

Product features

- Designed for the 32-bit multitasking operating environments of Microsoft Windows 98, NT, ME, 2000 and XP.
- Smoothly transfers data between Sage 300 accounting or estimating applications and other popular software programs, like Microsoft Excel, Microsoft Word, Microsoft Access and SAP Crystal Reports for Sage 300 Construction and Real Estate.
- Maintains Sage 300 security at all times.

Benefits

Easily expand important information beyond Sage 300.

Send important data from Sage 300 to other popular software applications.
